Intelligent Content Management solutions

Digital transformation is one of the greatest challenges companies are facing today. Agile internal and external collaboration on documents is part of this challenge – and at the core of Intelligent Content Management platforms. Embedded in company-specific business processes, it is important to be open to external business partners while also ensuring content security and compliance.

Box is the world's leading provider of Intelligent Content Management Platforms and a strategic partner of fme AG. Together with Box we transfer your document-oriented work processes in the cloud.

Challenge

Your employees want to share all types of content, including documents, images, and videos, with colleagues and external business partners. Outside of work, they are used to sharing content with other people easily and intuitively, on any device, using tools such as Dropbox, OneDrive, or Google Drive.

But in a corporate context, data security and compliance pose significant barriers to digital transformation. Existing, complex, and sometimes fragmented enterprise content management (ECM) infrastructure leads to high maintenance and licensing costs. Opening systems to external business partners presents IT with considerable technical and organizational problems. Employees are often encouraged to store content redundantly – and are therefore frequently confronted with inefficient and slow business processes.

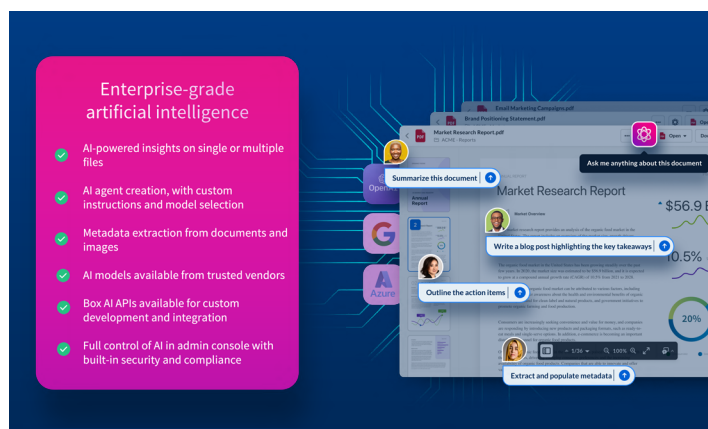

Solution

Box combines both worlds – simple and intuitive collaboration on documents across company boundaries along with data security and compliance.

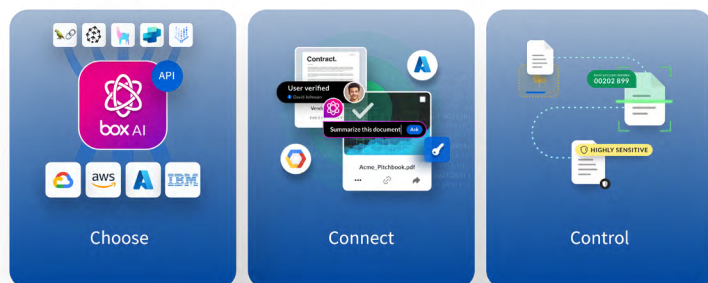

With standard access via web, mobile, or desktop, your employees can access documents on Box, any time, via any end device, including making content available offline for editing. Box has more than 1,500 integrations with other apps and tools, enabling you to consistently modernize business processes throughout your company.

Retention periods, native device controls, legally compliant eDiscovery, and GDPR-compliant data processing (also available in Germany on request) all offer your company the necessary level of security and compliance. The latest machine learning and artificial intelligence (AI) technologies help you to automatically structure and tag content.

AI support can be implemented step by step and at any point in the process. The Box AI API gives you flexibility in choosing which AI model to use for support.

Box AI ensures complete encryption with data storage and during data transmission, as well as optional higher encryption to ensure data privacy. The open platform interface of Box AI opens a wide range of possibilities for your company to integrate additional applications and portals in the form of a content-as-a-service approach.

Further Information

We would be happy to provide you with detailed information about our Box offerings upon request. Talk to us – we look forward to your challenge!

Benefit

Combine the advantages of cloud-based system architecture with those of a robust, secure, compliant Intelligent Content M platform and get:

- ✓ High user satisfaction thanks to modern applications
- ✓ Consistent data security and compliance
- ✓ Accelerated and streamlined business processes through the standardization of different systems for internal and external document exchange on one platform
- ✓ Streamlined licensing and maintenance costs by eliminating outdated local ECM systems and file storage
- ✓ A scalable and future-proof AI-driven content platform for all processes and applications in your company

Our Offer

Here's how fme supports your move to Box.

- Initial rollout of Box as a company-wide document storage and collaboration solution
- Support with technical implementation – integration and change management
- Guidance in the expansion to a central ECM platform in line with the established fme process model for cloud content management projects
- Replacement, integration, or incorporation into existing DMS/ECM systems and existing applications and portals
- Automated migration of existing document volumes with the fme migration center
- Development of specific solutions based on the Box Intelligent Content Management platform
